

MSA/MGA Single and Dual DC-DC Converters

28 VOLT INPUT – 5 WATT

FEATURES

Small size, 1.16 in² (7.46 cm²) - MSA

Surface mount package - MGA

- –55° to +125°C operation
- 16 to 40 VDC input
- 50 V for 50 ms transient protection
- Fully isolated
- Fixed high frequency switching
- Inhibit function
- Indefinite short circuit protection
- Up to 76% efficiency

DESCRIPTION

The Interpoint™ MSA Series™ and MGA Series™ of dc-dc converters provide up to 5 watts of output power over the full military temperature range with up to 76% efficiency. Thick-film hybrid techniques provide military/aerospace reliability levels and optimum miniaturization.

The converters are offered with standard screening, “ES” screening, or fully compliant to “883” MIL-PRF-38534 Class H screening. Standard microcircuit drawings (SMD) are available. See “Table 12: Element Evaluation” on page 14 and “Table 13: Environmental Screening” on page 15 for screening options and descriptions.

CONVERTER DESIGN

The converters are switching regulators that use a flyback converter design with a constant switching frequency of 550 kHz typical. They are regulated, isolated units using a pulse width modulated topology and are built as high reliability thick-film hybrids. Isolation between input and output circuits is provided with a transformer in the forward power path and an optical link in the feedback control loop. Excellent input line transient response and audio rejection is achieved by an advanced feed-forward compensation technique. Negative output regulation is maintained by tightly coupled magnetics. Up to 4 watts, 80% of the total output power, is available from either output, provided that the opposite output is simultaneously carrying 20% of the total power in order to maintain the specified regulation on the negative output. A predictable current limit is accomplished by

direct monitoring of the output load current, which results in a constant current output. Internal input and output filters eliminate the need for external capacitors for stable operation. Output filter examples in “Figure 3: Low Noise Output Filter MSA and MGA Single Output Models” on page 3 and “Figure 4: Low Noise Output Filter MSA and MGA Dual Output Models” on page 3 provide suggested solutions for systems where very low output ripple is required.

WIDE VOLTAGE RANGE

The MSA converters are designed to provide full power operation over a full 16 to 40 VDC voltage range. Operation below 16 volts, including MIL-STD-704E emergency power conditions is possible with derated power. Low-line drop out graphs, “Figure 17” on page 10 and “Figure 23” on page 11, graphs provide more information.

IMPROVED DYNAMIC RESPONSE

The feed-forward compensation system provides excellent dynamic response and noise rejection. Audio rejection is typically 50 dB. The minimum to maximum step line transient response is typically less than 1%.

MSA/MGA Single and Dual DC-DC Converters

28 VOLT INPUT – 5 WATT

INHIBIT FUNCTION

The inhibit feature can be used to disable internal switching and inhibit the unit's output. Inhibiting in this manner results in low standby current and no generation of switching noise.

The converter is inhibited when the inhibit pin is pulled below 0.8 V and enabled when its inhibit pin is left floating. An external inhibit interface should be capable of pulling the converter's inhibit pin below 0.8 V while sinking the maximum inhibit current and also allowing the inhibit pin to float high to enable the converter. A voltage should not be applied to the inhibit pin. The open circuit output voltage associated with the inhibit pin is 9 to 11 V. In the inhibit mode, a maximum of 4 mA must be sunk from the inhibit pin. See "Figure 2: Inhibit Interface MSA and MGA" on page 3.

UNDERVOLTAGE LOCKOUT AND TRANSIENT PROTECTION

Undervoltage lockout helps keep system current levels low during initialization or re-start operations. They can withstand short term transients of up to 50 volts without damage. A low voltage lockout feature keeps the converter shutdown below approximately 13 VDC to ensure smooth initialization.

MIL-STD-461

Use our FMSA-461 (down-leaded) or our FMGA-461 (surface mount) EMI filter to pass the CE03 requirements of MIL-STD-461C.

PACKAGING

MSA - Down-leaded package

The MSA Series converters are packaged in hermetically sealed, projection-welded metal cases which provide EMI/RFI shielding. The small size, 1.075 x 1.075 x 0.270 inches (27.31 x 27.31 x 6.86 mm), saves space and weight in critical applications. See "Figure 26: MSA Case Dimensions" on page 12.

MGA - Surface mount package

The surface mount MGA dc-dc converters can be mounted with pick-and-place equipment or manually. See "Figure 28: MGA Gull-Wing Solder Pad Layout" on page 13 for more information.

Internal components are soldered with SN96 (melting temperature 221°C) to prevent damage during reflow. Maximum reflow temperature for surface mounting the MGA converter is 220°C for a maximum of 30 seconds. SN60, 62, or 63 are the recommended types of solder. Hand soldering should not exceed 300°C for 10 seconds per pin.

The hermetically sealed metal cases are available in two different lead configurations. See "Figure 27: MGA Case Dimensions" on page 13 and "Figure 28: MGA Gull-Wing Solder Pad Layout" on page 13.

MODEL NUMBER OPTIONS					
TO DETERMINE THE MODEL NUMBER ENTER ONE OPTION FROM EACH CATEGORY IN THE FORM BELOW.					
CATEGORY	Base Model and Input Voltage	Output Voltage ¹	Number of Outputs ²	Case Options ³	Screening ⁴
OPTIONS	MSA	05, 5R2, 12, 15	S	MSA – down-leaded: leave blank	(standard, leave blank)
	MGA	05, 12, 15	D	MGA – straight leads: leave blank MGA – gull wings: Z	ES 883
FILL IN FOR MODEL #	__ M A __	_____	_____		/ _____

Notes:

- 5R2 is a 5.2 output model.
- Number of Outputs: S is a single output and D is a dual output
- Case Options: For the MSA down-leaded case leave the case option blank. For the MGA straight-lead case, leave the case option blank. For the MGA, surface mount gull-wing case, insert the letter "Z" in the case option position.
- Screening: For standard screening leave the screening option blank. For other screening options, insert the desired screening level. For more information see "Table 11: Element Evaluation" on page 12 and "Table 12: Environmental Screening" on page 13.

	REFERENCED TO	INPUT COMMON			
INHIBIT ACTIVE HIGH (OUTPUT ENABLED) Do not apply a voltage to the inhibit pin. ⁴	INHIBIT PIN CONDITION	OPEN COLLECTOR OR UNCONNECTED			
	OPEN PIN VOLTAGE ¹	9	—	11	V

Notes:

- Guaranteed by qualification test and/or analysis. Not an in-line test.
- See "Figure 28: MGA Gull-Wing Solder Pad Layout" on page 13 for more information
- Dual outputs: The over-current limit will trigger when the sum of the currents from both outputs reaches 115% (typical value) of the maximum rated "total" current of both outputs.
- An external inhibit interface should be used to pull the inhibit low or leave it floating. The inhibit pin can be left unconnected if not used.

MSA/MGA Single and Dual DC-DC Converters

28 VOLT INPUT – 5 WATT

The triangle (ESD) marking on the cover indicates pin one. Cover marking is oriented with pin one at the upper right corner. The straight lead configuration does not require a "case designator" in the model number. ex. MGA2805S

Dimensions in inches (mm)
Tolerance ± 0.005 (0.13) for three decimal places ± 0.01 (0.3) for two decimal places, unless otherwise specified. Please refer to the numerical dimensions for accuracy.

CAUTION:
Internal components are soldered with SN96 (melting temperature 221°C) to prevent damage during reflow. Maximum reflow temperature for surface mounting the MGA converter is 220°C for a maximum of 30 seconds. SN60, 62, or 63 are the recommended types of solder. Hand soldering should not exceed 300°C for 10 seconds per pin.

SOLDER MASK NOTES

1. Pad dimensions are for the solder mask. Leads common to each other can be connected to each other as desired.
2. Ground (case) pins should be connected to the center pad for improved grounding.
3. Connect "no connection" pins to case ground to reduce EMI.
4. Center pad should not have a solder mask. Solder, copper, or Au/Ni plate are preferred over solder mask for adhesive attach.
5. Pre-tin base of converter prior to soldering.
6. If less rotation of case is desired, reduce the width of the large case pad by 0.020 inches (0.51 mm). Pad length can be extended 0.010 inches (0.25 mm) towards the case body and an as-desired dimension away from the case body.
7. Do not exceed 220°C as measured on the body of the converter (top or bottom).
8. Attach the body of the case to the board with a thermally conductive adhesive or SN60, 62, or 63 solder. The adhesive can be electrically conductive as well. It can be applied as an underfill post solder or dispensed and cured prior or during solder.
9. In the presence of vibration, to ensure reliable mechanical attachment, the body of the case should be attached with adhesive or solder as noted above (note 8). The leads alone do not provide sufficient mechanical attachment.

Case D1 MGA Solder Pads, Rev F, 2013.05.31

Weight: 15 grams max.

Dimensions in inches (mm)

Tolerance ± 0.005 (0.13) for three decimal places, ± 0.01 (0.3) for two decimal places, unless otherwise specified. Please refer to the numerical dimensions for accuracy.

CAUTION

Maximum reflow temperature is 220°C for a maximum of 30 seconds. SN60, SN62, or SN63 are the recommended types of solder. See MGA gull-wing solder pads layout. Hand soldering should not exceed 300°C for 10 seconds per pin.

Materials

Header Kovar/Nickel/Gold
Cover Kovar/Nickel
Pins Kovar/Nickel/Gold matched glass seal
Gold plating of 50 - 225 microinches is included in pin diameter
Seal hole: 0.040 \pm 0.002 (1.02 \pm 0.05)

Test methods are referenced to MIL-STD-883 as determined by MIL-PRF-38534.

Notes:

1. Standard and /ES, non-QML products, may not meet all of the requirements of MIL-PRF-38534.
2. Burn-in temperature designed to bring the case temperature to +125°C minimum. Burn-in is a powered test.
