

DC/DC CONVERTERS 28 VOLT INPUT

MTO SERIES
15 WATT

NOT RECOMMENDED FOR NEW DESIGNS

FEATURES

- -55°C to +85°C operation
- 16 to 36 VDC input
- 50 V for 50 ms transient protection
- Fully isolated
- Fixed frequency switching
- Inhibit function
- Indefinite short circuit protection
- Up to 79% efficiency

MODELS

+5 & ±15

Size (max.): Non-flanged, case F4, 1.950 x 1.350 x 0.505 inches (49.53 x 34.29 x 12.83 mm)
Flanged, case J5, 2.720 x 1.350 x 0.505 inches (69.09 x 34.29 x 12.83 mm)
See cases F4 and J5 for dimensions.

Weight: 53 grams typical

Screening: Standard or ES. See screening table for more information.

DESCRIPTION

Interpoint's MTO Series™ of DC/DC converters delivers 15 watts of output power with three output voltages and a choice of two input voltage ranges. The MTO Series converters are packaged in hermetically sealed metal cases and operate at full load over a case temperature range of -55°C to +85°C (measured at the base plate of the converter).

CONVERTER DESIGN

The push-pull forward topology coupled with pulse-width modulation minimizes output noise and maintains good regulation. Nominal switching frequency is 250 kHz. Although an internal input filter reduces input ripple current, for applications requiring conformance to MIL-STD-461C, CE03, use the MTO in conjunction with Interpoint's FM-461 EMI filter.

Operating at maximum ratings may require removing self-generated heat. To increase heat dissipation, heat conducting material can be used in contact with the converter's base plate. Interpoint's Thermal Mounting Pad (TMP), model TMP-002, is designed for use with the MTO converter.

FEATURES

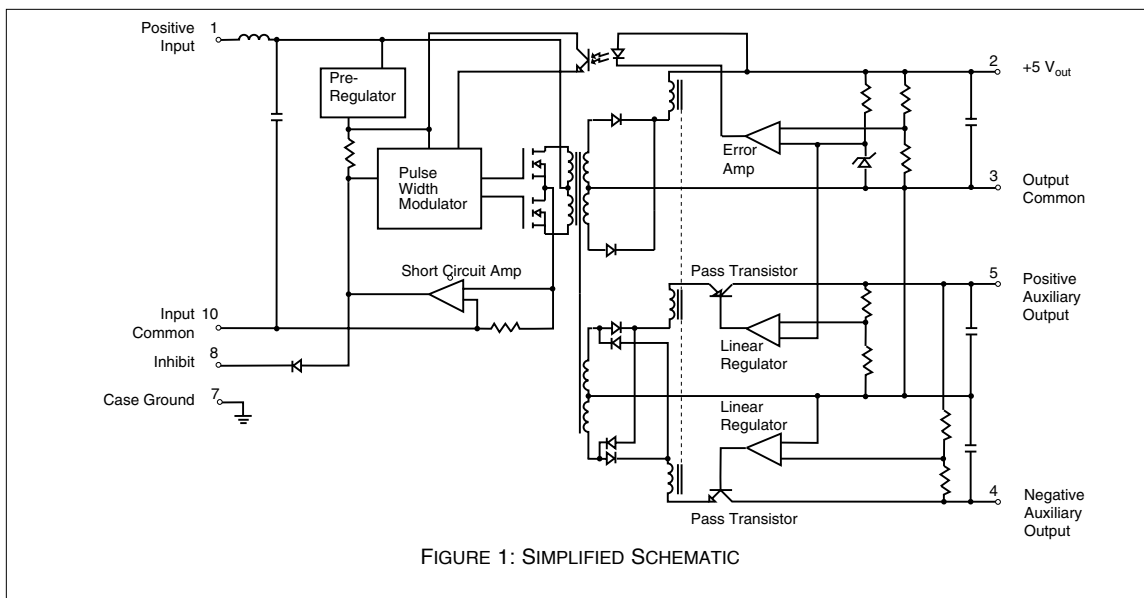

An inhibit terminal, pin 8, provides shut-down and start-up control. Applying a logic low (<0.8 V) will disable the output of the converter reducing input current to 8 mA, typical. Leaving the terminal unconnected or connecting it to V_{in} will enable the converter. The inhibit pin has an open circuit voltage of approximately 10 volts.

Soft-start provides a controlled 20 milliseconds turn-on to minimize inrush current and reduce overshoot at initial start-up or when inhibit is released.

Internal current limiting circuitry protects all three outputs against short circuits. When output power exceeds approximately 125% of maximum output power, the output currents are limited. In addition, separate current limiting circuitry protects each output individually.

PACKAGING

MTO converters are packaged in hermetically sealed metal cases. The cases are constructed of cold-rolled steel with a fused tin finish. MTO converters can be purchased in a flanged or non-flanged case. The flanged option provides increased heat dissipation and also provides greater stability when mechanically secured.

ABSOLUTE MAXIMUM RATINGS

Output Power

- 15 watts

Lead Soldering Temperature (10 sec per lead)

- 300°C

Storage Temperature Range (Case)

- -65°C to +125°C

TYPICAL CHARACTERISTICS

Output Voltage Temperature Coefficient

- 150 ppm/°C typical

Input to Output Capacitance

- 80 pF typical

Current Limit

- 125% of full load typical

Isolation

- 100 megohm minimum at 500 V

Conversion Frequency

- 250 kHz typical

Inhibit Pin Voltage (unit enabled)

- 10 V typical

RECOMMENDED OPERATING CONDITIONS

Input Voltage Range

- 16 to 36 VDC continuous
- 50 V for 50 msec transient

Case Operating Temperature (Tc)

- -55°C to +85°C full power
- -55°C to +115°C absolute

Derating Output Power/Current

- Linearly from 100% at 85°C to 0% at 115°C

INHIBIT

Inhibit TTL Open Collector

- Logic low (output disabled)
V = <0.8 V
Inhibit pin current < 2.0 mA
- Referenced to input common
- Logic high (output enabled)
Unconnected or connected to Vin

Electrical Characteristics: 25°C Tc, 28 VDC Vin, 100% load, unless otherwise specified.
